

## ABSTRACT

A green sheet coating material including ceramic  
5 powder, a binder resin including a butyral based resin as  
the main component, and a solvent. The solvent includes a  
first solvent medium having a relatively low boiling  
point, wherein said binder resin is easy to be dissolved,  
and a second solvent medium having a relatively high  
10 boiling point. The boiling point of the second solvent  
medium is in a range of 130 to 230°C. The second solvent  
medium is included by 5 to 70 wt%, and more preferably 8  
to 52 wt% with respect to 100 wt% of the entire solvent.
